

eLIOSFIELD

APP DATA SHEET

Always be connected whether you are in the field or in the office.

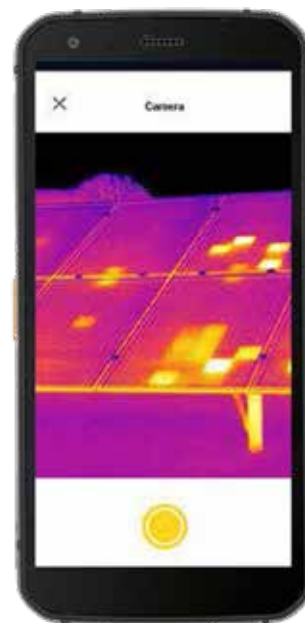

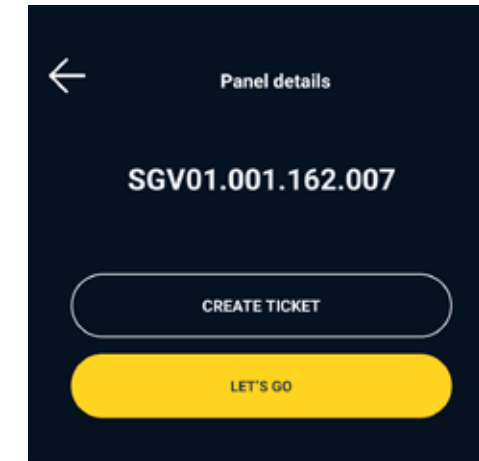

We are in the business of being green, are we not? So it's time we go paperless in the field. We have partnered with CAT so you can use the **EliosField App** and **CAT S62 Pro**, high performance FLIR camera to access your most recent inspection, find the anomalous panel, update panel information and create tickets. Then view everything you've done from the web-portal in the office. Simple on your end, complex on ours.

Features & Benefits

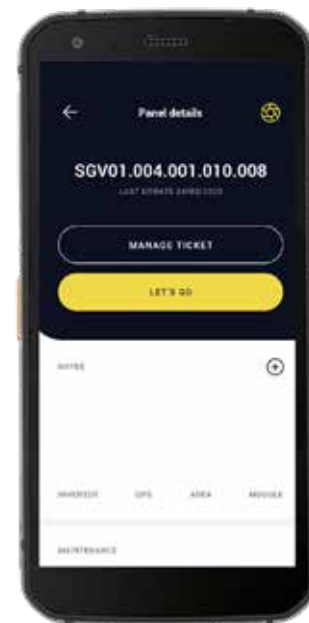

- Navigate your plant with built in **GPS** and **FLIR** thermal camera
- Create and manage tickets
- Go paperless
- Easily update panel information
- Take thermal photos of your panels to see anomalies up close and personal
- Upload the most up-to-date information to the web-portal in seconds

Saving time = Saving Money

Don't waste time looking for the faulty panels. Use the built-in GPS and built-in thermal camera to find the anomaly immediately.

Take thermal photographs of your plant.

Assign and manage tickets.

Upload important information and pictures such as serial numbers.

Effortlessly streamline all work from field to office with the press of a button

After you've checked the latest inspection and created tickets for the outstanding anomalies, you can now easily upload all your work in the field to the web-portal, where you can share the information with colleagues and clients.
